

CABLE TV AND TELEPHONE INSTALLATION

All dwelling units are pre-wired with a minimum of one cablevision service outlet for use by the resident. These outlets are generally located in the living area of the apartments. In scattered site units, this may vary, but outlets will always be in the located in a family or living are of the unit. Cable service contract is established between the resident, and the local cable carrier.

Telephone pre-wired service outlets are installed similarly in each dwelling unit. The general location is the living area, however this may vary as well and there could be additional pre-wired locations in the kitchen or bedroom areas as well. The resident establishes telephone service with local carriers.

As a result of the above pre-wiring of communication services, no additional outlets may be installed by the resident. Under no circumstances will any cable, wire, communication or transmission line be allowed to be fastened, attached, tucked into or mounted on the exterior of the apartment building or dwelling exterior. This applies to scattered site locations as well. Additionally, no drilling, boring, punching or otherwise penetration of the exterior wall surface will be allowed, and no cables or other communication equipment shall be allowed to penetrate dwelling structures, other than those placed by the LMHA.
